

Hacking Mathematics

10 Problems that Need Solving

By Denis Sheeran

Online Book Study

Target audience: gr 6-12 Math teachers

A quick read that looks at how can we hack our instructional approach and assessment procedures to promote engagement and inquiry?

- Increase connections between students and content
- Use homework effectively
- Connect with the global math community
- Question everything, provide meaningful feedback, and teach our students to do the same.

Using the App "Padlet" we will look at the 10 Hacks and how we can make changes in our practice to build our students' math minds. Participants will be asked to complete the weekly readings (2 short chapters a week) and participate with comments and questions on the app.

Start Date: Books to be delivered first week of November (First reading week of Nov 9th)

Completion Date: Final wrap up week of Dec 14th.
