The Power of Ideas:

Letting Students' Thinking Take Centre Stage

Annie Fetter @MFAnnie

Do your students believe that they have important mathematical ideas? Do they believe that mathematics makes sense and is about more than answers? Do they think of themselves as problem solvers? We'll explore routines and strategies for eliciting, valuing, and leveraging students' ideas in the classroom.

Wednesday November 4th

3:15-4:45 on zoom

Target audience: Secondary (middle)

Check out Annie's Ignite talk on the Power of Ideas!

<https://www.youtube.com/watch?v=OKTIh-SOM7s>

Annie consults with schools, districts, states, and a world-famous art museum, works with pre-service teachers, and speaks at conferences, encouraging a focus on sense-making and leveraging students' idea. Her very first Ignite talk, "Ever Wonder What They'd Notice?", has been used in countless PD sessions around the world. She reads a lot, is an unapologetic beer snob, sings and plays bass at bluegrass jams and in an all-girl band, plays ice hockey goalie, bakes sourdough bread, and is mother to two of the best dogs a cat lover could have.
